

Moje ING app available in new version

ING Bank Śląski introduced changes to Moje ING online and mobile banking on 12 November this year. Content and features are more personalised and the system has taken on a new, clear look to make banking easier to use.

Changes to Moje ING from 12 November this year:

The login page in the browser:

- More visible safety messages
- An expanded help section for logging in and activating banking
- On-screen keyboard now also for the login field (and not just the password)

The screen before logging into the app is:

- Faster login thanks to better positioning of the Login button
- Better adaptation of functions by the client to his or her preferences
- Active parking and public transport tickets visible without logging in

Banking home page:

- Divided into 3 intuitive main sections:
 - **My finances**, where all the client's financial products can be seen –
 - Shortcuts**, with which the most necessary functions can be quickly accessed
 - **Chosen for you**: a section where the client will see personalised prompts and offers
- The browser-based version will additionally show an **Expenditure Analysis** section – a refreshed summary of the client's budget; the company will see the Income and **Expenditure Analysis** section here; and the affluent client will personalise it himself or herself
- Possibility for the client to set up **shortcuts** to selected services and add-ons
- Additional access to the tabular view directly from the home page
- Easier switching between company, individual and brokerage accounts
